B

	Metadata	Data
Select	**`dt[CRITERIA, meta = TRUE]`** `> male_meta <- dt[sex == "M", meta = TRUE]`	**`dt[CRITERIA]`** `> late_dt <- dt[t > 5]` Note: metadata is updated when selection removes all data from one id.
Alter, create & delete (meta)variables	**`dt[, X := value, meta = TRUE]`** `> dt[, genotype := "wt", meta = TRUE]` `> dt[, sex := NULL, meta = TRUE]` # delete	**`dt[, Y := value]`** `> dt[, t_2 := t-1]` `> dt[, t := NULL]` # delete *t* Note: update data in place. No copy of dt in memory.
Expand metavariables as variables	**`dt[xmv(X)]`** `> dt <- dt[xmv(sex) == "M"]` # select *data* with *sex* `> dt[, s := xmv(sex)]` # copy metavariable as variable	

Aggregate & summary	**`dt[, OPERATION, by = id]`**
	
	`> # mean activity, per individual`
	`> dt <- dt[,.(`
	`mean_act = mean(activity)`
	`), by = id]`
	`> dt[, .N, by = id]` # count reads per *id*
		OPERATION

Join data & metadata	**`rejoin(dt)`** `> full_table <- rejoin(dt)` Note: used mostly after aggregation or preprocessing	**REJOIN**
